New York University, Master of Science in Computer Science (May 2023)

August 11, 2023

Apple, CA

Dear Hiring Manager,

If you are looking for Software Engineers (or Backend/Cloud Engineers) with demonstrated ability to accomplish challenging projects, please consider my candidacy. I am a Computer Science graduate student at New York University (NYU) with an expected completion date of May 2023. I believe that my professional experience of almost 2 years coupled with the principles of software engineering and leadership I am learning through the rigorous curriculum at NYU make me a good candidate for such positions at Apple.

As my resume indicates, I interned with Icertis over the summer where I worked on some experimental tasks to help improve the workflow efficiency and performance in Azure.

I have earned positive recommendations from managers, architects, co-workers, and professors throughout my professional journey for being hard-working, passionate, and taking ownership of the work I undertake. I specialize in backend technologies, microservice development, and cloud deployments. Before my graduate degree, I worked at a rapidly growing startup, developing and maintaining a cloud native application working with various AWS services and Python using serverless framework. Here, I was also responsible for 4 interns in my team. Specifically, the following points highlight the value I offer:

- Multiple CSPs including AWS and Azure.
- AWS Certified Solutions Architect - Associate.
- Development of backend services using serverless framework.
- Data Structures, Algorithms, and OOPS concepts in multiple programming languages including but not limited to Python, C, C++, C# and Java.
- API development.
- Agile Project Management.

Aside from this, I have good communication, management, and collaboration skills and will fit into any team. I am excited about the prospect of working at Apple and applying these strengths to the success of your organization. Please reach out to me for any additional details about the skills and capabilities I have to offer. Thank you for your time and consideration. I hope to hear from you soon.

Best Regards,
Dhruv Jain
